Annoucement

I declare that the engineer labour represented below has been prepared and executed independent.

Author signature

Work summary.

The main goal of my engineer labour was to create a voice communicator, that could be used to support the work of telephone salesman. I represent the it's development, from creating the utilitarian software, to the realization of this project in a programming language. I demonstrate, step by step, the processes that lead to the creation of the final – working version of my VoIP communicator software.
